2000 Watt 'Heat Wall' Element
Your Sunbeam Non-Stick Wok features a special 2000 watt 'heat-wall' element. This element wraps around the base and side walls of your wok providing superior cooking temperatures and heat distribution.

The heat is quickly channelled from the base of the wok up the side walls. This 'heat-wall' system creates the ideal wok cooking environment for fast and easy cooking.

The 'heat-wall' element is completely cast into the heavy duty base. This increases the life of the element and provides faster heat distribution.

Trigger-Release Control Probe
The heat control probe is thermostatically controlled to deliver perfect cooking control. The indicator light switches 'on' when it is heating. When the wok has reached the desired temperature the indicator light switches 'off'. The indicator light will then cycle 'on' and 'off' as the thermostat maintains the set temperature.

The heat control probe is ergonomically designed with a handy trigger-release. Simply hold the probe and squeeze the trigger with your thumb to remove it.

**Temperature settings**

**Trigger Release Control Probe**
The probe is thermostatically controlled and incorporates an indicator light which switches off automatically when the temperature selected has been reached and then cycles on and off to indicate that the selected temperature is being maintained. The trigger release makes removal of the probe easy.

The settings on the dial represent the following temperatures approximately. Pre-heat your frypan on MAX setting then change to your desired setting.

Using your Non-Stick Wok

Before First Use
Ensure any stickers are removed from the product. Wash in warm soapy water, rinse thoroughly and dry your wok and lid.

Do not immerse the heat control probe in water or any other liquid.
1. Insert the heat control probe into the socket of the wok.
2. Plug the cord into a 230-240V power outlet and turn the power on.
3. Set the heat control probe dial to the desired temperature setting, or the recommended temperature setting for your required recipe.
   Allow 5 minutes for your wok to reach the temperature setting you have selected.
   The wok is now ready to use.

Note: The thermostat light on the heat control probe indicates the temperature at which the dial is set.

This light will remain on until the set temperature has been reached and then will cycle on and off throughout cooking. This will ensure that the wok maintains the correct temperature.

Detachable Cook & Clean Base
Your Sunbeam Non-Stick Wok features a quick release detachable ‘Cook & Clean’ base. This enables the base to be quickly and easily removed from the wok cooking vessel.

Simply turn the wok upside down and turn the release dial anti-clockwise as shown in the illustration below.

Quick-release ‘cook and clean’ base
Various cooking methods can be used to make a wide variety of foods in your Sunbeam Non-Stick Wok.

**Stir-Frying**
Stir-frying is a quick cooking method conducted over very high heat. The wok should be hot before adding oil or any ingredients. Be sure to maintain maximum heat when stir-frying by cooking food in small batches.

**Tips When Stir-Frying**
- Meat should be cooked in batches, approximately 150g per batch. This prevents the temperature of the wok dropping too low and also prevents the meat from stewing the meat to the wok to heat through.
- Slice meats into thin strips (about 5cm long) so that they can cook quickly.
- If stir-frying marinated meat strips, drain off excess marinade as it tends to boil, which toughens the meat.
- Ensure the oil has been preheated to the correct temperature before cooking.
- Do not use the lid when stir-frying as stir-frying is a method of dry cooking and the steam droplets will toughen the meat.

**Deep Frying**
Deep fried foods should be crispy on the outside and tender on the inside. The food should be coated with batter or breadcrumbs and placed in a larger quantity of hot oil.

**Tips When Deep Frying**
- Preheat the oil to the desired temperature before adding food.
- Do not cover the wok with the lid when deep frying. This will prevent foaming or splattering of oil from condensation droplets.
- Food should be fried in batches, a few pieces at a time. This prevents the oil temperature from dropping too low and also prevents a soggy crust from forming on food.

**Shallow Frying**
Shallow frying is a method used to cook and crispen foods in a small amount of oil. The food is cooked at a lower temperature so that a brown crust forms on the underside. The food is then turned over to brown the other side. Usually 1 cup of oil is sufficient for shallow frying.

**Steaming**
Steamed foods are tender and juicy, retaining most of their nutritional value. Place food on the steaming rack provided and place in wok over simmering water or stock. Cover with glass lid.

**Note:** The liquid should only be just simmering. If the heat is too high it may cause the liquid to bubble up over the food. MIN/MED heat setting should be sufficient.

**Stewing and Braising**
The wok can be used on a low heat to make your favourite stews and casseroles. The lid should be left on when stewing.
Always turn the power OFF and REMOVE the plug from the power outlet before cleaning. Remove the control probe from the socket of the wok.

To clean interior surface
When cleaning the EasyClean™ non-stick coating do not use metal (or other abrasive) scourers. After cleaning, dry the wok with a soft cloth before storing.

Heat Control Probe
If cleaning is necessary, wipe over probe with a damp cloth.

Do not immerse the control probe in water or any other liquid.

Storage
Store the control probe carefully in a safe place. Do not knock or drop it as this can damage the probe.

If damage is suspected, return the control probe to your nearest Sunbeam Service Centre for inspection.

Wok, Base and Glass Lid
The wok, base and lid are fully immersible and can be washed in warm soapy water using a mild household detergent and a soft washing sponge.

For added convenience, they can also be cleaned in the dishwasher. Do not place the control probe in the dishwasher.

Removing Stubborn Stains
Should your wok require additional cleaning of stubborn stains and build-up, the following method is recommended:

Combine: 2 tablespoons bicarbonate of soda and 2 teaspoons water.

1. Pre-heat the wok for approximately 1-1½ minutes on MIN/MED setting.
2. Turn the power OFF and remove the plug from the power outlet. Brush the above paste solution onto the non-stick surface, allow to stand for 1 hour.
3. Wash the wok in warm soapy water using a mild household cleaner and a soft washing sponge.

Dry with a soft cloth before storing.

To Clean Steaming Rack
Wash in warm soapy water using a mild household detergent. Rinse thoroughly and dry with a soft cloth before storing.

The benefits given to you by our warranty are in addition to other rights and remedies under law in relation to the product.

In Australia our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

Our goods also come with guarantees that cannot be excluded under the New Zealand Consumer Guarantees Act.

If your warranty claim is not accepted, we will inform you and if requested to do so by you, repair the product provided you pay the usual charges for such repair. You will also be responsible for all freight and other costs.
